**DEP SUPPLEMENT**

Many activities related to reservoir draw downs require separate DEP and/or U.S. Army Corps of Engineers approval(s) prior to beginning the activity(s). The information provided on or attached to this supplement will be used by the appropriate DEP office to process the necessary state and/or federal authorizations or to determine additional permitting requirements. Providing the information described on this form will allow DEP to this review and approval or screening procedure while the draw down application is being processed.

Often, the applicant has already submitted documentation for the proposed activity to a DEP office. The applicant should still complete this supplement to the draw down application, indicating what information was sent to which office.

The primary purpose of this supplement form is to simplify the submission, review and approval of minor projects requiring written state or federal authorization. This form and the information attached are not intended to replace state and federal requirements for obtaining individual permits for major projects. The appropriate DEP office having jurisdiction over the proposed activity will generally provide the applicant with the necessary authorization to proceed with the work, a request for additional information, or a determination that an individual permit(s) is required.

**Specific Project Information**

The following information to be provided for each type of activity does not need to follow any particular format but should provide sufficient detail to allow DEP to establish appropriate jurisdiction, waiver or general permit eligibility, small project eligibility, appropriateness of permit by letter, or the need for full state or federal permits.
